

SMART TAP - dispense tap

Click your way to smart dispensing !

The *Smart Tap* dispense tap is a new beer tap that has been developed for portioning and volume measuring of beverages. Utilizing an electric valve and connected to a WWB DRINK SYSTEM dispenser the tap can portion 2 different measures. Measure one is dispensed by gently clicking the handle once, and measure two is dispensed by clicking the handle twice (double clicking). The *Smart Tap* dispense tap can be connected directly to the BCS-22, -61 and -71 dispensers. The dispense tap will speed up the portioning and requires no extra push buttons to be installed at the bar. The dispense tap is equipped with a manual valve that can be used to shut off the flow from the tap. The smooth design and the high quality coating makes it easy to keep clean. The dispense tube is made of high quality stainless steel (AISI 304, 1.4301). The designed washers for mounting contribute to an easy installation. *Smart Tap* a new way of dispensing !

FEATURES:

- Innovative dispense tap for portioning and volume measuring of beverages.
