

# TANK SHIFTER

## 1000 L MW

The WWB Drink System Tank Shifter automatically switches from one tank to the other when one of the tanks run empty. This ensures non-stop beer flow and prohibits lost beer time during the switching of the tanks. The tank shifter alarms the dispenser (if connected) when necessary and replaces thereby the Sold out Unit. The appropriate cooling and proper light protection of the 0,7L cistern keeps the beer cold and minimizes growth of yeast cultures. The Tank Shifter can be used both in combination with 500 / 1000 liter stainless steel tanks or with serial connected kegs. A remote alarm unit, with light and sound signals, is available as an extra accessory in case an alarm indication is needed outside the store room.

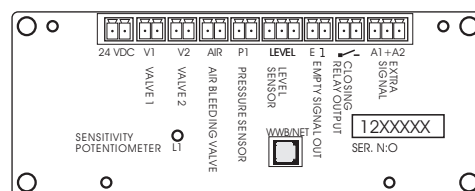

### FEATURES:

- Cooled 0,7 L cistern with automatic air evacuation.
- Activated by low pressure level or low fluid level.
- Indication LED for empty tank.
- High quality pneumatic valves.
- Capacity: 70L/min 2.5 bar with 16 mm tube fittings.
- Standard tube fittings: 16 mm (2 x 10 mm tube fittings on special request).
- Air pressure / CO2 requirements: 4-6 bar.
- IP-44 protected electronic
- Extra alarm available

### TECHNICAL DATA:

- Supply voltage: 24 V DC.
- Dimensions: 260mm(w) x 580mm(h) x 170mm(d).

### CONNECTIONS:
