

## Local areal interface

*BCS LAI is an interface that picks up salesdata from dispenser units for beer, wine and liquor and sends the data forward to the cash register system. When the BCS LAI is placed in every bar you will not need any network that combines all the bars to one dispenser server. You can find out how many products that has been poured and how many that has been registered by reading from the cash register system. If any communication problems occurs the system will automatically switch to off-line and the salesdata will be stored in the dispenser.*

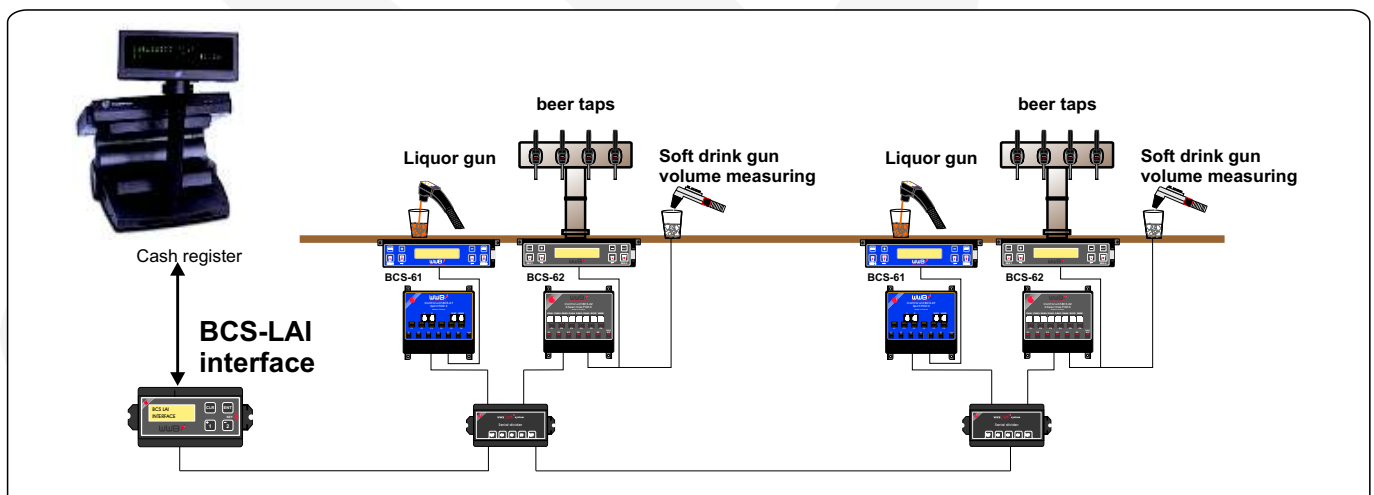

*BCS LAI can easily be installed in bars that already are in use. It is an efficient and cheap solution that connects the cash register system with the dispenser system.*

### Technical data:

- ❑ Max 20 dispensers
- ❑ 950 users
- ❑ Dimensions: 126\*58\*37 mm
- ❑ RS-232 connection
- ❑ Link system from dispenser
- ❑ Automatic off-line function
- ❑ Buffer for messages
- ❑ Automatic on-line test
- ❑ Power connection: 2 pcs 220v outlets
- ❑ Weight 450 g

### Example : A bar with two salespoints

Data subject to change without prior notice.
