

# BCS-23

## Beer dispenser

BCS-23 is the dispenser that satisfies the requirements for beer portioning today and in the future. The small size, splash protected connections and easy-to-use functions are some of the many features. The electronic identification key increases safety and activates different functions depending on user access. BCS-23 controls three different lines. Every line can be programmed separately for portioning or free flow measuring. In addition, sales results can be programmed in order to count up sales of the same product from different lines. One-touch pressing of the buttons activates most of the functions used. The BCS-23 dispenser can also be used to portion cider or wine.
