If measure pulses are zero. Measure = 0, is dispalyed in the sales mode when pushing the sale button.

No pulses, is dispalyend in the sales mode when pushing the sale button.

- the flow trough flowmeter is too slow
- flowmeter is not connected
- flowmeter is broken
- valve is not connected
- valve is not opening

In Cleaning mode the flow and the valve can be checked

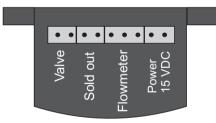

In Measure setup the flowmeter can be checked so that it runs and counts down the pulses.

There is a 0.5 sec. delay before the next portion can be dispensed.

Connections:

Sold out is normally close input. It works only in Sale mode.

Cleaning:

Open the line by pushing portion button. Close the line by pushing portion button again.

1

Measure setup:

Choose portion size to adjust.

1

MEASURE SET. LARGE 00300 Portion pulses are displayed.
Change pulses with PLUS, MINUS and CLR buttons.
MINUS button moves the cursor and PLUS button increases the figure.

When an arrow is displayed in front of the measurement pulses, portion size can be checked by pressing the button again. If the measurement pulses are zero, the portion size can be set by pushing and holding the portion button again. Push until the desired portion is set.

Set measurement pulses for both sale buttons.
